  - Domains
  - Instances
  - Measurement Archives Availability
  - BWCTL Availability
  - HADES Availability
  - LS Shared Root Availability
  - Incidents
- General Information
  - Metrics Explained
  - Contacts

# Management Summary

- No pending issues or remarks.

## Notices & Issues

- Although availability of BWCTL service (slide 11) is lower than usual, it was only because of reachability issues from monitoring system to MP's. No other evidence exist to suggest that actual availability of BWCTL service was less than 100%.
- No. of active MP's (slide 7) were 14 in August since Milan MP's installation on new server is pending.

# Deployments in GEANT Service Area

- # of Deployments in GEANT Service Area
  - which are part of the service during this reporting period: 17

# Domains (Map)

## Service Instances

- # of MPs active during reporting period: 14
- Maximum Availability of a single MP: 100.00%
- Average Availability of all MPs: 100.00%
- Minimum Availability of a single MP: 100.00%

# Active Service Instances - History

# Average Availability - History

- GEANT-PSONAR-MA: 100.00%
